Game Changing Translucency

- ST** **Super Translucent**
Dual multi-layered zirconia with gradation of color and translucency
- UT** **Ultra Translucent**
Highest level of glass-like enamel emulating multi-layered translucency

NEW!
KATANA™
Zirconia

The ultimate in KATANA™ zirconia

KATANA™ Zirconia ST & UT for Anterior Restorations

The new multi-layered zirconia series from Kuraray Noritake Dental Inc. is designed to achieve superior results with gradational chroma and gradational translucency for anterior crowns and veneer restorations.

KATANA™ STML Super Translucent Multi-Layered

Ideal for anterior or posterior crown restorations, both chroma and translucency are graded from incisal to the cervical region. Less translucency in the cervical region minimizes the effect of the abutment color and the chromatic and translucency gradations reproduce esthetic enamel and dentine effects.

KATANA™ UTML Ultra Translucent Multi-Layered

Ideal for anterior crown or veneer restorations, achieve that high level of translucency required for a natural look with surrounding teeth and prevent noticeably white and unnatural appearance. Suitable for treating cases in which it is desirable to utilize abutment color to enhance final results.

- Glass-Like Translucency
- Chromatic Multi-Layer
- Translucent Multi-Layer
- Highly Esthetic and Functional
- Outstanding Durability
- Easy Milling and Storage
- Cost-Effective and Time-Saving

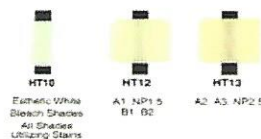

KATANA™ Zirconia ST/UT series discs come in 98.5mm diameters in different thicknesses

Fitted color may not accurately present actual product

KATANA™ Zirconia ML Multi-Layered

KATANA™ Zirconia HT High-Translucent
